Odisha, Approved by AICTE, New Delhi and Recognised by Govt. of Odisha)

Chapter-1 (omprofuetion to (loud Compering)
Cload Computing

Internet Dota procesing or D ata Staroge

Detn
if is the delinery of on-demand compating Services oner the internet on a pay as you go basis.

Example
Gmail, Grigle Drike, Yrutbe, amazon orive
1.1 Histarical denapprent / Erration of elrad computing Coapcomputing is not latest teennology. (lout. Compating has evolved (teneloped gropucily) throush a nuniber of phases Ghich inclages.
(1) Grid computing
(2) ufisity computing
(3) Soltarase as a Serrice
(4) Cloug Computing
(4) clout enputing
(2)
$\rightarrow$ tilext generation chiterret computing
(3) Surtcare of

1

1 (2) uficity
(1) Grid computing
$\rightarrow$ Silving lasge
$\rightarrow$ obtering to appeications
$\rightarrow$ Nexut-genesation
pata Centres.
1
 servicel
$\Rightarrow$ introrfoeed in late 19908.
(Eirlation or Cloud Compating)
1.2 risim or cloud Compuping
in bimplest ferms, clowd Computing means storing ary accesing the dape and progrons on gemete servers that are horped on the chterrot chspeod of computer's hard prive or local server. Cloud Computing is afso refartred as internex based computing

There are following vision of cloud computing

1. Cloud competing provides the facility to provision Vistaof harferare, runtime enrorament and Services to a person having money.
2. These all things can be led as long as they are nested by the lesser.
3. The achale Collection of computing System is transomed chto collection of afilities, which can be provisioned and composed together to deploy systems ch hours rather than drys, with no maintenance cart.
4. The lang term vision or cloud computing is that IT Services are traded as citizens in an open market anthout teannorgica and legal barriers.
5. A cloud provider con also become a consumes of a competition services in order to kaltil its promises to Customers
6. A cloud provider can also be a buyer of a compefitine service to bertill its promises to customers.
1.3 Chanoeteratics it cloud computing
(1) on demand Selk-Serrice: competing Copubisities Swh as neteronk Stroage con be bet-op whenever requinid urethout requising any haman interaction.
(2) Borad reterork aceops: A11 Capabicities are arailasle over a neterirk can be acausble from angulse by means of any client plathtros (e.g mosile phones, tableps, (aptops any anorstiong)
(3) Pesarsa poling: Clong Serrice provider hes Computer's nesources to matiple Consumers asith ditferent physic of resourees otynamically arsigned accoraling to Consumer demand (el.g stroge, procesing, memory and netwrors beadasitth)
(4) Roprit elasticity: Capobreities Can be elasticay Retup an scape rapilly oeersting to Consumer tomand.
(5) Merared Service: Resounce crage can be montored, comprilled and reported, provitiy transparency bor both the provider anf Consamer.
(6) XPO mointenance 1 eary maintenance
(7) Security: Copy or our dota on is lake on the ather.
1.4

Cloud Completing refegence model
Throee types of cloug competing referenee models are
(1) I aas (Infraspueture as a Service)
(2) Paas. (plattorm as a Serrice)
(3) Saus (Sitterare as a Serrice)
(1) Iaus (Intrastrooture as a service)
$\rightarrow$ Virtuepized Servers
$\rightarrow$ Stirage are netararking
Examples
Amazon EC2, $S_{3}$, Rishtscote, VCloup.
(2) (platform as a service) $\rightarrow$ paas
$\Rightarrow$ Runtime environment fro appeications.
$\rightarrow$ Development anf pataprocasing platforms
Bxomples: Cingous Azure, Haqrup, Gergle AppEngine
(3) Soltarare as a Service - Saas
$\rightarrow$ Enf luer applications
$\rightarrow$ Scientikic applications.
$\rightarrow$ offece Automation, photo editing
$\Rightarrow$ Social neturooking
Examples
Google Documents, Faubrok, Flickr.
1.5 Clous Compating Envirament
(1) Appricotion doeralapment
(2) Intrastruepare and Syetem derefopment
(3) Compating platforms ardtechnologies
(1) Afpeication denelopment
fypeications that lenerage cload Compating bevos' from its Copabieity to dynamically Seape on demend
Example: Thes applications.
Scientific Applications Can require hage computing capuity to pertorm largue-sore experimems once in acuhile. So it is not kerible to buy the inkraspracture supporting them. in the's care, Clour computing canke the Slation
(2) Intrastruefure ard Syttem pencopment.
$\rightarrow$ Sitraepruetare as - a Service Selutions provite the Copobicities to adp arp nemove nesources.
$\rightarrow$ plaftorm as a Service Solutions Contr) the provisioncing proces and lese of resocures. These can be lithed Completely transparent to developers on Subject to fine control.
(3) Compating platforms and terniogies
$\rightarrow$ Amazon Cneb services (Aws) - AWS is a Cloud Computing platterm that provides Customers with a aide array or cloud services.
$\rightarrow$ Google AppErgine: it is a plattoom as a Service and cloud Computing plattorm tor deraloping ant hosting cub applications in Gergle-managed. Ddata Centerp.
$\rightarrow \quad$ Micris.if Azure : if is micrositts public Cluad Computing plattorm. if prorifes a range or cland searrices, inclating those for Compute, andytics, storage and neferanting
$\rightarrow$ Hadorp: Hadorp is a jara-hased tramearisk wed to maripulate dota in the claod ur on premises. Hadnp can be critalled on cloud seovers to manage biggata arkere as clond afone can not manage data arithout hadoup inct.
1.6 Cloud Services Pequirements

1. Etticiency / Cost trequetion: By lsing cloug intrautruature, yo don't have Spent huga comours of mony on parchosing and maintaining Squipmeat.
2. Data Secwrity: cloug olters mary adrencer Searsity features that gearartae thef data is securaly stonet ant horfled. Clout stroage providers implement bakline protections fro their plaflorms ard the data they procers, Such as aushenfication, ocies Confrol and eneryption.
3. Secobieitly: Ditherrif Compories have dithenf IT aeeds - a large enterprise of lrot. Employaes Cran's have the 8 ame IT requicrements as a start-up. Using cloud is a groof solution because it enthles enperprise to etficiently - and quick ly scote op/ dorn acoroting to business demends.
4. Mohicity: Clang Compatiog alows mobile aceers to Comperape tafa ria smaxptiones onf terices.
5. Disarter recovery: Dafa lise is majar concers for al ogganizations, ofug arith tata searity stroing your fata ch the crood guarntees that data is afcrays arailable, evenit your equigment VKe. laptops or $p(s$, is domage $p$. Cloud-barep services provipe diak pata neconem bor all kits of emergency scenarios.
6. Contre): C[oup enomies you complepe hisibieify Qne confrel oner your fata. You con enily pecige which berers hare cuhat lent of acers to what tata.
7. Market reach: Deneloping in the cloud enobles weers to get their Dappeications to. market quickly.
8. Aufomefic Sottome coptapes: Clond based appeicefions aufomotically sefpach anf
themselues. appate themselwes.
1.7 Clouef anf dynanic Intrasprecture

(Cload and fyramic infraitrueture)
9. Sesvice manogament: This type of Spera facirity ${ }^{\circ} r$ b tanefiondity provido to clay IT services hy the clout Service proviters. This facility inclatel visibieitg, ayomation anp confry to derinuring the first clog IT service.
10. Aret manageomp: ch this antes or property culich is invilut in provifing the cpout serrices are getting managed.
11. Visturizatio ary Conscrifation: Consarifation is on effrort to requace the Cixt of a fechrioggy by imporiving ins opesafing efficiency \& effuctivenees. it means migrating trom lange nomber of resources to becur one, which is pore by Wispeodization fecharlogy.
12. Informafion infraufrefere: if helps the busines corganizations to achiere the tollowing chtomation compliance, araiobikity of sesoures refiention anf recurity objecfines.
13. Energy - Etticiency: Hire the IT intrasprucera or ogarization Sarfainable: it means if is not likely to qamage or etheet any atherting
b. Securoty: This ciout introstricetere is dexponsible tro risk management. Kuk mangem manogment pefors to the rixks intilued in the serrias which are bking procided by the clad-Sirvice proviters.
14. Resilience: This chfrouprexture provides the leature of resilience means the Services are resijient. it means the inkrasfrueture is sefe from all Sides. The IT aperationg willnit be easily get offeretod.
1.8 Clow adiption
cload adpption is a stratayy bed ingenterpoise to impore the scacebicity of chterret-baied dotsax copabieities while redaing corf and risk.
Whenes ciond f diption - and buly?
A varing or gnfupries benefit trom coond ofoption, cncpuding heolthcare, manketing and appertising, retail, finance, any edaction Benebits cacluele:
15. Heathcare: Fheed by digita and Sociat Curamer behaviors and the neet for lecure and acerrble efreton'c heath neersps (Etys), hrepitets, clinies, crop otheor
16. masketing and Atrartising in an cinpustry pepedist on Sresel metia, as aull as the quick creation and pubrieking Cr coutomer-belevart content, agencies are lying hyhrif cquag adoption Srapegier to detiver criticol ceient messagos to thair local any arong wide ourfiences.
17. Retrii: A Succertivy e-Commesce Stratignt Dequimes a sound chterant Strotegy: arith the hulp is clowd adoption, entersnet baud retail is able to eftectively mark if to ceutomers. and Saire therg porquet tofa forlen monuy.
18. Finarce: Etticient expenve management, haman resoarres anf Ceustomer Commanicofions. arre throe of the nory improtent borisies neets of troday's winance ongenizations. Foo these reasms, finanic of services institations are now plaing their e-nail platforms ant mantefayg
in the Clood. twis $O$ in the Cloud.
19. Equeation: eitermet baect lequcation oppontontries are now neme popular then erser. The cloug alouss cenversities, privape instifutions, and S. 12 puseic seherls to provide feoming, honaiwork, ant graticy syxtems onlene
1.9 Cloop Compating Appeications
clows compating is appried in olmorst ant the wiels vike

- Buiners
- Enterpainment data stroage
Social neteroorking]
iducation
managomey
Some or the prpalar appeications or cloud Comprating ane
(1) Business Apprications: Cloove compatiog Comproety mere Cllabiratike and eary huriness antithe heap ir bitferent apps. Vike Mailchimp, Clotter, Gargle Apps $l_{r}$ beginess an quickimes

MailChimp - - if prevites one ermail pareiching plafterm.

- cit is a simple emai menueting syefom
cif proviges a vanius optim. to deriso, Sent ang Save fomplat bor emaels
* Chater: This app haps to share cimpeotant chtormation abry orzanzation in reatione
 - on quagle D.Cs. if allows the busines ciers to share them in a combined cray.
$\frac{\text { Quigbuige }}{\text { Silations } \text { for businels. accouting }}$
- i't arsixts in moxitosing cash fow, cneatiy VAT returss and creotig hoinery report.
Q Dote Stroag anf Boyk Seatia Appeications
Bry.com if provides prog i prop Sentius for biles. 'it is nacemary fro the wers to prop the biles intr. Bog and accey Grom arythere
* $\frac{m^{0} z y}{\text { service it provider on line boel cy cy }}$ service for files to prevent data loss
* Jougua it is a aweb bere chfarbace, if haps to shows a Single wat of Contentys for files stroed in Gugle pocs, Boundny ant Daryboz
(3) Mongament Appeicotions:
* loggl : it haigs to traek time pesing olventy to a parficior pryeot
* Evernote if is periai designed to create, organize anf store ditherent pieses ot medfa. it Keeps all statt bue teny focement, phot, wedee or lven cuebpoge in the Cloup.
* oupright: it is an aecoanting app that hyps for traekchy income, expenses, procit and loues io neal time
(4) Ald Appeicotions

Mo0: if provides art Services like dangnig anf pronting husiness carps, port conts ond whi coergs.
(5) Bentertornment Appeications:

* Aver boy. frm it provides Streaning Seapice The messic files oor stomel corind ant play krom the clow using player or Servica.
(6) Sres Appricotions
* facebork: if provites Sreid meforary éry Serovices biles, Stotys ant mere.
* Twritter if hyps in chfencefing lorith thas any ongaizzation, celebrity os any person whac's on twitter anp can havel lapeif uptapas oregoesity them.

Excercise
$\frac{\text { Impertant Questions Chant }}{\text { What is Coud Computiog }}$
(3) Debine Grig Campating
(3) Dltine utility Comporing
(4) Debine Iaas.
(5) Define Paes
(\%) Define Saas
(7) What arre the applicetions are used by clouf Compuing
(8) Define Cloud Adiption.

Orpretant questions (SLong Questions)
$(1)$ Descmbe Gboug the Histricat dendepment/ erolution or cloug compating
(2) Desuribe aboy the Charouterdics of Clood computing.
(3) Desciaine aboy the clrag Computing reference model.
(4) Deserothe aboy the cloup Computing entirermest
(5) Detresibe about the Cloap service sequirements.
(6) Explain about the Cloug and Dgramic entroaf rueture.
(7) Descrine abry the Cloup applications.
$x$ The Fond $x$

Chapter-2 (Cloug Computing Architecture)
2.1 Ftrofuction

The clool compating architeoture compries of mang Cload Components lach or them 1008oly Coppled. are can brodly dinide the claop architetane into tur parps.
(1) Frontent
(3) Boek ind
(1) Front end:
nefers to the Client pary or Cloug computing system. it consixts or intertioes FOppeications that are required to weles the Cload platiform
exomple: Ches Browser.
(3) Boek and:
refers to clrup itselt. it comprises ot hage date sproge, Virteeo moehine, Security mehondsm, Serrices, peplymint models, Serrers lefe.

Components of Clood Compoting Arechitecturn
(1) Client Fnfrastructure:
it is a tront end Component (provides GUI to inferaef with cpaod)
(2) Appicication, it may be any Siltware or plattorm that a cliert crants to access.
(3) Services:
if manages that lukich type or seavies you access occorting to the client's requirement.
cloud computing others
Sars, pars, Jas.
(4) Reentime Cloud:
if provides "Execution \& runtime environment" to the hirtuof machines.
(5) Storage: one ot the most important components it provides a huge amount of Strsage Capacity in the cloud to store 中 manage date.
(6) chtoastruetume: cloud introstrueture includes hardorare $\&$ software components such as Servers, Storage, network devices of other resources needed for cloud comparing model.
(7) Monagoment: Manages Components (like application, servile, inkrastruetune)
(8) Secosify: inherit boekeng component provides Security meehonism in the back end.
(9) internet: Median through which fronted $中$ bookend interacts.
$2 \cdot 2$
Cliad reforence model
Some as 1.4
2.3 Tapes of clocels/Cruel Deptoymentmode
(1) Pabsic
cloud aprivale (3) clioul (1) cloud
(1) Pabsic Clouo
$\rightarrow$ open to all to stroe $P$ acess infermation $V i a$ infernct
$\rightarrow$ pay as per lue (for the services)
$\rightarrow$ Monaged by third parties (cloud Service proviter)
$\rightarrow$ Fenpamental characternfics of pubeic cloug is MULTIITENANCY
lexample
EC2 (Amazom elastic Compute (poup), dropbizs, Gorgle drine

Adrantages
$\rightarrow$ it is maintaind by Clood Servia provider, So twe need nof maentain if.
$\rightarrow$ Location indepempent because its Rervices age derivered through the intromet.
$\rightarrow$ hish scopobivity
exaingle grail others 15 GB . Whe can increase onytime i deerease ofs after choreasing
$\rightarrow$ Cort ettreetine and pay aber per le.
Disadvantages
$\rightarrow$ ber secure hecause nesources are shared pubeically.
$\rightarrow$ les Cromizahle as Canparad to private Cloug.
cloug
$\rightarrow$ Services accescible withich on organdizotion 1.e it beforgs to a specitic coranonaters
$\rightarrow$ Sometimes affo called. chternof/ curporato (hap
$\rightarrow$ Can be managad by organization, 3xd party de
 Can acley the oresrorres

Adrantegies
(i) Hish Secority: in pritate clooe Security Concerms ane hish Since Customers dafa pother sensitike inferomation dresnif flouroy of a pribate intraspreetane.
(ii) data privaly: only outhosized peaple can acers the pato
(iii) nove Custonizoble: as Companies get to costomize their solution as per requionement
(cv) improved melobielty

Dirs seprantages
$\rightarrow$ private clood is aclessible Grithoin an onganization, So, the area of operations is linited.
$\rightarrow$ Hish Cost $\rightarrow$ lere neep to innert ion Hartware \& Soltware
$\rightarrow$ limited Scopobility
(3) Hyonid cprod
$\rightarrow$ beatances of pablic \& preirate cloud
$\rightarrow$ Contico a aetrities pertanold by privote clang
$\rightarrow$ nm. coitical actrities pertormat by pubsic choot
$\rightarrow$ Apvantoges $\rightarrow$ Scatchieity, security, low Corf (as Compry 'to privape cloup')
$\Rightarrow \quad$ l/enebility
O.sadvantages
$\rightarrow$ Managing is difficulf compleng be caupe thare are haore than One type of deplogment model
$\rightarrow$ degerepenuy on intrasprueture
(4) Commanily Cloud
$\rightarrow$ alloms Sesrices to be aeresible by a groop of Sevasof orgonczations to share the ohformation betemen the ogganization \& a spreitic Commenity.
$\rightarrow$ owned, managed \& separafiod hy one oormore organizations in the Commanity or 3 repparty.

Agtranteges
(i) Cas requetion/cost eftretine
$\rightarrow$ it is Cheoper than private cloug (mattiple (mponies Share the bill, anhich. lowers the Cort.
(ii) Shoring Omng Componies (the resounces)
(ii) more seare than pabric cloup buy ley the privape cloup.

Discoplvatages:
(i) dafa is Celestrible between ogganizations Checare the qata its stored of the Bame location any dofa stoned these misht be cacersible by others)
(ii) Consistent maintenance caip
(iii) ovesal increase cuot than pubric Clay.
2.4 Clour onteropercabing af standots

Snteraperaboexity
$\rightarrow$ The abisityy of turo ur more Sretems, appeications or components to exchenge and uk
informotion.
$\rightarrow$ The obisity of Systems to provide and neseike Services from ather syotems ard to be the services so enterchangep to enable them to operate effectively together.
$\rightarrow$ Interopesobicity is on enabler tor interchange abivity (rogluement of one element with Onother)
$\rightarrow$ Inferasiving Interoperabisity is the gooy ar standargs but stareforps 'arn't guomfer interrperabieity.
2.5 cloud compateng Interoperabierity use cases
$\rightarrow$ user of one cloup alerssing stroage én another cloud (to provite elartic strogege)
$\rightarrow$ Applications and Services ranning on (and Commonicating between) heterrgenous Cloud Plafferms I
$\rightarrow$ Appeicution using nesoarees (CPU, Stroage)
in onother hefraganous (foad plafferm (resource shasing)
$\rightarrow$ Resoare shaning cerres ditterent time zones.
$\rightarrow$ Demonsefoxtion of tiga portaicisty (acrass Service Provépers)
$\rightarrow$ Whot is needed to fronefer a roming STATEFUL Sertice krom Cloug proviper $A$ to $B$.

- Moving a file sharing service between cloud providers.
- moving a Sproaning Service betaven Cloup providers

26 Role of Standards in Clow computing enridonment
Ditheren storpards are used in Cloud compafing environoment
(1) Stanfarts for Appeication Developers
(2) Stanfarts bor maesaging
(3) Stantarts tor Secusity
(1) Startards Appeicotion Devetopers

- Brousers (Ajax)
- Data (XML, JSOM)
- Solution Stacks (LAMP and LAPB)

Browsers ( $A \mathrm{ars}$ )

- Amos is a technique, not programming language
- Cohen we cored gas in unebsite there els no need to retract page.
- Small cate

XML

- XML stantster Extensible Markup Langue.
- XML cara designed to stree \& transport data
- XML was derigned to be bath human-and machine readable.
JSOK
$\rightarrow$ Javascript object potation is alisffucight data chtercharge format
$\rightarrow$ 'it is easy for humans to reap any write.
$\rightarrow$ it is eng for moekines to parse and generate.
Solution stacks (LAMP and LAPP)

$$
\begin{aligned}
& L \text { - Linux } \\
& \text { A - Apache } \\
& M \text { - My soL }
\end{aligned}
$$

P- PHP or Python.
$\rightarrow$ LAMP is a popular open sure solution commonly used to ran dynamic Cuebsites. and servers.
(2) Stantoris for messegetor

- Sengle Mescaga Fraufer grapcol(StiTip)
- Pory office procel (pop)
- Dntirnat mevegitg Acces Protoca (Irtos)
- Single Object Accey protrcil (SuAp)

Semple Mersage Fransfer propoci (SM TP).
$\rightarrow$ SMTP is the Standarp protecol tro email Services on TCP/IP neturor
$\rightarrow$ SMIP provites the obisity to seng and receine email mersages.
parf ottice protace (pop)
$\rightarrow$ POp is an application layer protocl in the OSI model that provides endapors the obieity to fetch and receive email
Fintronet Memoging Accen propicol. (IMAP)
$\rightarrow$ IMAP is a Stardart protacol tor acrising email on remote on a pomote serper from a locop client

Schyle abject fecen proticol (SAAP)
Sapp is a Protocal sprictication for lechanging struetarey intormation in the implementation of Cueb Servicles is compoter nefaroons.
(3) Stangaods bons Security

- Securify firsertion Martup Larguage (SAML)
- open tathartication (OAttr)
- SSL/TLS

Security Arsertion Miratup Laguage (SANM)
$\rightarrow$ SAML is a language protoci for hanfing authestication and autherization in a neforronk.
$\rightarrow$ it is one of lasious XML based morkup languages avaiable to help arth asperts of lueb penelopmant anp we.
open futtentication (Ofuth)
Ofth is an open startary aufterization protion or franework thot pesercibes how anrlatod resturs $\&$ Seotices can Rekely allow artenticuta acess

SSUTLS
Secure Sockets Layers(siz) ond Toupport
lager Secarity (TLS) both Cryptograplic. propocos hed to increase Secusity hy encorpting Commenication over Computer neturarks.

Exercise
Emportant Questins (Sheot Questions)
(1). Dethe Clay computing Architecture
(2) What are the components are cured in chas computing frefiticeture.
(3) Defrine purbeic cirug
(4) Define Private croup.
(5) Define Hyboig Cloug
(b) Deftre Commenity cloud
(7) What do you neagy by clual groteropoasinf
(8) Defin SMTP, Pop, IMAP, Solp SAML, SSLJLS.

Dimportap questions (Lorg questions)
(1) Descrike abory the grout retioence maty.
(2) Explain about the types of Clougs.
(3) Desinibe ubocy the Cloug Interoperabisity and Stanfarps of luse cases.
(4) Explain about the gole of Stantarats in cloun computing environment.
3.0 (Scofobieity $\frac{\text { Chapter-3 }}{\text { and Fault Tolerance })}$
3.1 Introquction $/ 3.2$ Scalobitity and Foult Tolerance

Cloug Scolobirity is the abirity to seate on demang the focieities and services as anf When they are required by urer.
Tenmg Reratod to Scalabcesty
(1) SCALE-UP - Frereasing/ Atping resourees in lxisting server
(2) SCALE-DOWN - Taking out resources that are afded an exitsfing server.
(3) SCAlE OUT - Adtidy New/extra serhers in the Custer.
(A SCALEIH - Toking ous Adted Servers Rrom Cluster

Aprantages or Scarminty
(1) Mare starage
(2) More power
(3) More hersabicity
(4) Les time to create
(5) Cort Sarings.
cloud Foult Tolerance is toleroting the bausts by the clous that are pone by mistace by the user.
$\rightarrow$ Faust tolesance refers to the abrity or a system (computer, netarark, Cloud c|ustes, efc) to (ontince operating aithout interraption when one or mare of eits Components tail.
Metries bors faut Tifersence in Cloud compering
$\Rightarrow$ The existing toult toleschce teennique in Clout computing Consifers Vasiocs. parameters

- throughjut
- rerponse-fime
- Scalabieity
- Pertarmance
- arailabirity
- Urabibity
- Delabicity
- Security ard associateg aherheod

Types of Fault tolescence
(1) Reaetive foutt tiperance:
it techniques are used to reduce the impoet of tailares on a system crken the faipures have vefually ocured. Techiques bared on this policy age Chekpoint / vestart ard retory and soon.

- Cheek poinfing/restarp- The faileg task is restertep trom the wecent Checkpoint rather thon from the beginning. if ils an ettrecient techinque lor lasge agpeication.

Reprication - inurter to make the execufion succerd, various repeicas of task are ruen on ditterent resources Centill the lukile repeicated task els nof Crashed; Hadorp and AmezonEciz are cuep for inplementing reprication. dob Migration: on the oclurrence of bailure, the job is migrateof to a new makhe HAprovy can be wrep for migrating dob to ofter machines.

- Fepry This task level tecknique is simplest among all. The leser resubaits the task on the some cloug mesuarie
- Task Fesumension: The foipe tark ds Sobmittol again either to the sane moekine on which if aras operating or to Some other Machine.
(2) Proactive Foult Tolerance.
prooetine foult tolerance preticts the kautts proaefinely arrpreplace The suspectad componentes by other uroffing Comporvents thus araiding reconent from lauts $\mathcal{L}$ errors.
- Sirturare Renea - the Syxtem is planned bro periousic reboots cend enery time the syitem Starts writh a nee Stote
- Selk-heoting - failure or an constance or on appeication goaning on muftiple vistuap machines es confrolled cufomaticaly.
- preemptive Migration - en this. Technique an apprication cb constanty abservep \& concyzed. preemptine migration of a task depends upon beed-back-Iorp confrol mechorism.
3.4 cloog Solutions
$\rightarrow$ A cload band solution velers to applecations, starage, on-temand Sertices, compater neturork or other. resogres that are acceites with On inferinet Connuefion throush Onother pooriders shaned cloug Compufing kromeciork.
$\rightarrow$ The simplexp ar of to think of Croud Compating is by compasing it to epectricity. goar home ard businx is have it but gou doon't need a pours plant an your propesty to wee it. you juss connec, to the one that prevites epeefricity to your area.
3.5 cloud ecosyxtem
$\rightarrow$ Cloug eoosjsiem is a term uset to deseribe the Complex. Syrtem of intertependent Components that work trgether to enasle cloud services.
How cload ecosystam wark S?

$\rightarrow$ The conter of cloup elosyitem is pureic cloup Service provifer. it might be an Iaas provider swh as Amazon wreb Services (AWS) ar a Saas henfur buch as Safestorce.
$\rightarrow$ AWS is the Center of its ecosystom, but it is afsua paot of the Salesforece elosystem. Sapestorce russa number of its servies on AWS's intsasforeune
$\rightarrow$ Alus is afsion a part of the google elerfitem. google runs a number or its Searices on $A \omega S / S$ intoappuctive.

Benebits of a cloud ecosystem
$\rightarrow$ Companies Can use a cland elosystem to beild hew business modets. if becomes relatinely easy for meqical perice Manafelurer
Fir Example
to Lounch a heort-monitoring Service onits cloup servece previder's cloup entrasfoceture and then sell the Service of ongside its main business of monifacturing heart monitors for Hopitals.
$\rightarrow$ in clrop ecosyitem, it is afs easies to aggregate tata and analyze how each parat or the system alfects the other parts

Fir example
It cen elosystem Consists of patient records. Smart perice logs and heath core provider recorts, it becomes possible to analyze pafferns across an entire patient populations.
3.5 cloud Business Process Managumat
$\rightarrow$ Business process Management (BPM) is a mature business discipline that has Spurned a number of technologies to Suppiaft it.
$\rightarrow$ Tull cf is the agile Who survive those argainafions who are able to adapt to Change, to innovate as cerell as continuously improve, and $t$ continouly monitor $p$ analyze the results of these adaptations
$\rightarrow$ ch the current $\mathrm{Creb} \ln \mathrm{B} b \mid \mathrm{d}$ business environment process a many cares depend on the eisconerg and gelegnition of components that exist as web searices
$\rightarrow$ The current trend is towards emphasis on mobicipy and collaboration as essention elements to support the agility and Currency ot business processes.
$\rightarrow$ This means that BPM hendors are enconeasingly Seeking to ougrrent their BPM packages by incorpucratiog 马oroots. Web 20 type Konctimality.
$\rightarrow$ Cloud based BPM is one response fo these new demands.
$\Rightarrow$ BPM governs organizations cross bonctional, Customer focused end to end Core business process.
BPDM Like cycle

The BPM likecycle is on iterative process ch which all ic the BPM aspects are covered.

(1) Design:

The design phase consists of identifying existing process and Capturing the business processes in process models.
(2) Implementotion
in the inplemestation phose, the designeof process is implementot in an execuoble proces language, which can be dreployed en a BPMS.
(3) Encertment

The inactment Phare is the rentime phose of the likecycle. The busines proces is peploged and monitored by a BPMS.
(4) Evaluation
in the evaluation phase the monitoned information that its collectag by the BPMS is cused to veries the business proces. The Condasions
drawn in the erquation phare are chput for the neret iferation of the lisecyele.
3. 7 Poxtabicity and inferoperabigity Sloud portobieity
$\rightarrow$ Cload partabisity is the abicity to morne appeications and data brom one cloug computing envisonment to another crith minimal pissaytion
$\rightarrow$ Clout partsieity enobles the migration of cloup serveces from ane cloug profiter to onther or between pubsec cloup and a private cloud.
$\rightarrow$ Tha types of cloud portonicity
(1) Dataportabicity (2) Apprication portabicity
(1) Data postabirity

Defa portabieity means the abirity to mone foto (Files, documents, dutabare toblesere) from ane cloup system to another and have that dota lesaple in the other syrfem.

Doto

A
The arrous show examples of cloug dafa portonieity
$A$ - clood Service Syxtem to $/ 5 \mathrm{rm}$ clow service
$B-$ clood service tol from cloud servile
(2) Applicaion protusieity

Apprication protobieity means the abirity to more exe cutable sortarame trom one cloup system to onother, and be able to ran it correctily in the pertination System

Appeicotion

Dafa

The arrocos show examples of cloup apprication portabirity
A - Cloud service syrtem to / 6rom cloud Service
B - Cloug Serrice to/ brom cloup service.

游 (lood Interoperability rekers to the 2.4
3.5Clead Seorece Maragenent

Servica Henasment

1. A systam integral of Supply Chain managacothat Contantes actual Compary Soles and the Certomer.
2. The goal or Service management is to maximize Serrice SupplyChains.
3. The parpose of serveice management are to reque hish corit by कotegrating protuctes ond services.
Cloud Serrice management
4. Cloud monitosing and clad service managenest trols allow cloug providers to ensure optimal pertormance, continuity ard efficioncy in tistacieng, on pemant environments.
5. The derinery of dynamic, cloup-baved chtranfruefure, plapform and appeication services poesn't ocur in a vacuam.
6. in additim to best praefices tor effeefine adminispration of all the epements als.ciated with cloup service delinery, cloup service managenent and cpoof monitiong trols enab/e providers to feup up with the centinually Shitting Capacity domanis of a highly elartic enticonment.

7. The above figure illasprates that Service managment provides the risibieity, Cantre) and abomation needed for efficient cloud delivery in both pubsic and privafe gmplementation.

Simpeity user inferaction with it

1. The weer briandly self service acleperates time to value
2. Service Catalouge enastes Standarts which drives Consistent Service. devitung.
Enable poricies to lewer cort Centh provisioning
3. Aromatic allocating and de-allocating of resuasces will make derivery of Services tast.
4. Provisioning poricies allow noleare onf reluse of aspets.
Increare System admen proquetivity
5. Proriting the benalits to the brofer will probably become a crifical Sueress taetor in clous compating.
6. Due to the grouth of Service broferage basiness will cacreare the abieity of cloud Consamers to use Services in a frustararthy manner.
7. There cloud mediators Ceil help Companies to choose the right platform, deploy the apps across multiple clouds.
8. 8 Cloud oltrexing
patterns of this Category caver potterent functionality bound in clouds regarding the senctionality they provide to customers and the behation they display
(1) Cloud Environments
paftions of this Category describe the hosting environments of cloud in tetacil and refer to other offerings composed to form these environments.
(2) processing offerings

Computation facility by the cloud.
(3) Stage offerings

Storage facility by the clout.
(4) Communication offerings
data exchange facility between mare than

other.
3.9. Testing cunder control
$\rightarrow$ Cloag Terfing becomes Abiquifous Cuherein Fesrarces such as the sobterame, hardurane exe, are cheokst in a thorough tersing? effort.
$\rightarrow$ Dwe to Clofain Challeges like:
(1) Hish Carts
(2) Rerfrictive budger
(3) fomerous test cases
(4) Various liers acrons the glibeefe.
$\rightarrow$ Clouf ferting typicaly involus monitaring andpeporting on reap-arroly leser traffic confitions as crellas
Loof bafance and stress testing for a range of Semul ated usage Conditions.
$\rightarrow$ Main acm it the croop testing is Consuners Can access the IT resourles in the test entironment.
$\rightarrow$ Itherfine pesting becomes essential Whereen arailabirity of Eifreible and Scofable cheranfruefure, diffributed texp environment or conlinitad' stroage helps in goving time as cerell as the cost.

Fenefians tectiong
To hesity the basic fecutionalities with rexpect to raceis input that should motch the expeeted cuppat suen as wese logeh, Shutfown or Syitem, ete.

Loop tesfing
To ensure Stesieity with anumber of users aclessing the cloug with Scaling-i or Sceling-out, loop testing is confueten to hanfle variable looed.
performanci and Benchrary terteng
To esfobrich Certain Yardricks Considering the pertormance of the appsication Guch ar Consestency aeroys derices.
Neturra Securify testing
Tepting in ferms of retarrok connectivity maintenance of data citegrity, protoul ife becomes imperaifine to ensure a Selere environment.

Fresopesobieily and compatibility Texting
$\rightarrow$ TO test seances suctionatity cecrops browsers and $p /$ offers.
$\rightarrow$ This pest is to Cheek the System with harrows operating system environment. This Can be done using clout tenting Services.
Stree Testing
This king of text is to ensure the degree of endurance or the System. That is, to What extent the system is able to per form Confer excessive pressure, Simultors are used to create peak load situations tor Condoefing stress test.

Browser performance Testing
Different browser platforms are lied to Check the compatibility of the application with the browser.
Latency Testing
if is the measurement of latency (speed) between the action and the Corresponding response after deployment of the system on the cloud.
3. 10 Cloud Servica Centrols
$\rightarrow$ Crad Service Controls improves your abieity to mitigate the risk of qata exbilteration trom cloup servias Guch as Clout storoge and Bigquerry
$\rightarrow$ With cloup Service controls, you Can create perimeters that proteet the resoupees ond dota or Services that you eppricilly sperity.
3.1) Rirtay Desktop Intrastructure (VOI)
$\rightarrow$ VDI is a peennelogy used to creape
a Virtuofized derktop environment on a romote server sofecp.
$\rightarrow$ in simgle terms by using VOI you con accers your ristral derktops remotely.
$\rightarrow$ What are the bosic components of VOI
(1) Virtulization
(3) Hypertisor
(3) Connection Brofer
(4) Derktep pools
(5) Apprication Vistwerization
(1) Virtactization
ristaolization is the creation of a histuag rersion of a desktop, OS, Server, or storage

Chapter - 4
Cloup Monagement and Virfuacisution Teechology
4.1 Create Vintualised Arehiputure
$\rightarrow$ vintadization is a teekrique, which allouss to share a Bingle physicy instarce (Server) of a resource $O_{r}$ an apprication amang rultiple Cortomers and "ogatrizations.
$\rightarrow$ it pres by assigning a vgicof name to a physicap stroage and proveting a pointer to that Physical resousees culen demanded.

Hypervisor (Kinsuof Moekin Monitor) creation of a Vistar Mrekine (VM) over exehting operafing Syetem and hartavare known as hardwaree Vintuacization

A rintual Moekine provides on entironment that es lrsicaly Separated from the cenderlying harduare.
$\rightarrow$ The Mochine on cukich the Virtuat Machine is going to coneate es Known as Ho if Morkine and that hirteap machine is geterned as a Gulest Maehine.
Types of rintucelization

1. Hardurace Vimpolization
2. operating Sgetem histaolization
3. Server rirtuopization
4. Storage Virturization.
5. Harduare hisfuacization
$\rightarrow$ Hyper visur (hispaof Mochine Mgonager) is dimatty insfallet on the haspuare Syxtem is Known as hardarare Vistarization.
$\rightarrow$ The maen 1 ob of hyperteisir is to control and manitoring the proayor, memory, and other hastarame ressures.
$\rightarrow$ Abter Visfarization of hardorare System ure can chital disterent operating syrfem on et and ron ditherent apprictions on there OS
usage
Handarane histualization is meinly done lor the Serter plaftorms, because Caprolling hirfuap Machines is much larier than confrolling a physical Serner.
6. Operafing Syetem ristureization
$\rightarrow$ ahen the hirtaed Moehine Manager (VMM) is instalted on the hoit operating syspem instray of fimeetty on the harfarare Systom is known as operating Syttem Vistacization.
lyage
operafing System. histureization is mainly used bor testing the applications on ditterent Plaftorms of OS.
7. Server Vistacization
$\rightarrow$ When the Virtaof Aporkine Monager is fincetty installed on the Serner Syxem ès known as seaherhirtabization
csuge
server virtureization is qone because a single physicap server Con be divided into Maltiple Serturs on the demand bests and for bapancing the loop.
8. Storage Vértualezation

Storage virtueization is the proces of grouging the physica storage krom multiple neturory staroge deviess Bo that if 100 Ks like a bingle starage terice.
usofe
Storge virtamization is mainly done for baefuy and reconery purposes.
4.2 Data cenfer
$\rightarrow$ A Data (inter is a tacility on some. 1ucefion where mattiple serhers/merehines are engaged in cillection, staring, procersing and firtribution of massine omront of fota
$\rightarrow$ Dofo Centers hose a refurrk's m'ry crifical Syutems and hitof to the Contenwity of paily operations
$\rightarrow$ The secarity and reliabirity of dota centers ond their intormation is a top priorify for argarizations.
Why cureneed of Data Centers
$\rightarrow$ tro stroing massive omount of dota
$\rightarrow$ for proveging the $24 \times 7$ services to the Curtomirs.
$\rightarrow$ bor data Sobety and Securily
$\rightarrow$ bor Confueting doy to day bosiners operations.
$\rightarrow$ Girgle and tocebrik are inhesting
$\$ 700$ milcion.
Components of Data Center
A data center consiuts of
$\rightarrow$ A banch or Serners Connectet throush nefurre to ran (ompley apprications.
$\rightarrow$ A Coving System to manage the heat nelased by mactines.
$\Leftrightarrow$ proper rentilation Syrtems to enpage Optinal air-5/0w.
$\rightarrow$ Screpinizet Secusity Systams to prewent cenoughorized aley to pata alroes Cenfers.
$\rightarrow$ power dortribution \& Bacfop units (gensets, bafteries, ete) for smwoth execution losing power Supply cenits.
$\rightarrow$ Kedantart Requadant Unins/Buegus Syrtems to ensure meximum ceptime .

Types or Data Centers

- Internat Data Centers (IDEs)
- Cloud Data Centers (CDC)
- Dark Data centers ( $D D C_{s}$ )
4.3 Resiliency
$\rightarrow$ Resiliency is the ability to handle failures gracefully and recover the whole system. This is a huge challenge for services and applications where the Components compete tar resources and depend on other internat or external Components/ Services that tail, or may rely on defective sifterare
$\rightarrow$ cloud resiliency is the (opacity to rapidly) adopt and respond to rips, as awl as oppertanities, in simple currants resiliency refers to improve our business $50 r$ handle risks.
$\rightarrow$ This ass maintains the continuous business operations that support growth.

Resiviency Copabiesties : The strapegy
Combines muftiple parts to mitigate nits and Fimprone besches resilience.

1. Grom a bacilities perspective, Che nay cirdst to implement power profection.
2. Grom a Secirily perspeetive, to protect our data and appeications tre may crant to implement remotue boepup, identily management email tiltering or email archiving
3. krom a procens perspectine, we may implement cidentification and ofocementation of mory crificy business
Proceses.
4. Iram a arganizational perspectich, che moy crant to cimploment $\alpha$ hirfup urofetation entironment.
5. From strategy \& Vision perspectine, cure may cuant to look of the king ot crisis management process.
+4 Agiling
$\rightarrow$ in a clood Computing catert, agility otten refors to the abieity ropidly deralop, tert and launch applications that prine besiness growth in a constantly Changing IT enticoonment
$\rightarrow$ Cload teennlugy otters basiness a foy mears of promoting agirity, and is a hity tro in the enterprise pash toward better adaptobileity.
Adrantages of agirity
(1) Gracter Businus Continaity and Atwibierity: cloug services con be rilled ap or from arper basiness requirements withoust increasing the poul of IT equipment that Company mout purchare and domage.
(2) Infrasprueture Agivity:

Clow oflows Componies to Signiticantly decrease the time it takes to provision and pe parision
(3) Atyemated aflrcation of resource.s

Cproy Compating peries on birtributing curorglays anel sharing of nessarus to acheine coherence onf economic of scope.
(4) up-tr-dufe techallogy upgrades.

The refrech cyeles for on cepgrate Can be ling as there are plenty depenponcies that need to be planneed out intrasfrecture, operations, and girterage.
4.5 Cisce Data Centers Neturork Archipecture A compreskibe Archifecture that enables IT exelofine to
$\rightarrow$ Consreipate onal Virtualize Compatiy, Storage and refarark nesconces.
7 Delined Bravere and aptimize of anpligee, pasther and Custaner alless to inkormation and apprications.
$\rightarrow$ protect and rapidly reconer IT resoonces ond applications.

Bailt with
Neterork Fitroatrueture: Gigobit/L'Gigobit, Grkiniband ary stirage suritching and optica framport.

$\rightarrow$ Recovery, Secority \& Gecersibicity
Disadrentages
$\rightarrow$ Raek-ups may be slower dryenss apoon the internt
$\rightarrow$ Hisher internet utisization
$\rightarrow$ privaly concerns.
4.7 Cload Provisioning
$\rightarrow$ The clous provisioning is the allocation of cloud proviter's resuonces to a Centomer"
$\rightarrow$ when a cloug proviter alcepts a requet brom a Costomer, it must create the apprepriate number of Virtay Y ohines $\left(1 M_{B}\right)$ cenf alfcaf gesources to kupport them. The proeers is Condactey in Sevesp dittereng clocys
(1) advance previsioning
(3) Gonanic provisiming
(3) Lesrself provisioning

The form provisioning Simply means "to provide".
$\rightarrow$ Coued provisioning prinasily defines how, what and waten on organization aril pritision Cfrap Services. These servias con be private/Infinnt, pobric or hybrid eloup proputs \& Solutions.
$\rightarrow$ Clout providers detiver cpoog lilutions Throush on-temont, pay-as-you-go Syetems as serrice to curtomess and enfusers. Cloud provider curtomers acley Clad restorces through.
$\rightarrow$ Trfarmet and programmafic aeley and are only billed for resrurces ond services used celcording to a subseribed billing metho of.
$\rightarrow$ Depending the businsy model, a cloud provider may proride rasious Solutions, sweh $A$.
Intrartrueture as a Sertice (Iaas): may inclade hirtua Servers, Virfual Strage and histar perftops / Computers.
Sottarare as a Serrice (Saas): Decinery of Beimple to compley Sokterage through the internet
Ploftrom as a Sertice (paas): A combiacion or Iaas and Saas perinerred as $C$ chibier Serrice.

Types of provisioning
(1) Adrance provisioning
(2) Dynanic provisioning
(3) Userselt provisioning
(1) Agranced/port sapes provisioning:

The Customer is provided arith the resource upon Contract/Service Sign up.
(2) Dynaric/on Demand provisioning;

(3) User-selk prevesioneng.

The ceser/cuifomer adts a cound Serrice or derice themselhes
(3) Dynamic/on - Demand provisioning

The Cutfomar or srequerting appeication is provited with resuarces on rantime.
4.8 Cload Asset Management (CAM)

Hesh traerabigen

1. in semple corrds Che Can Soy that hish araiabieity gefirs to the arciabieity of resousers in a compater syatem.
2. in terms of cloud compating it refers to the avaiabicity of Cloud services.
3. High araiabisity is the heart of the cloud.
4. it provitos the idea of anjluhere, any time acless to service of Cloue enveronment.
5. Arailabisity is afso neratod to qeliabieity
6. Arailabieity is a techrolegy issue as and as businem is ue.
7. Hish Availabieity can be seingly defiowed by the bionple equation

$$
H A=\frac{M T B F}{M T B F * M T T R}
$$

cuhro
MTBF - Mean Time Between Faipnes
MTTR - Mean Tine TO Repair HA Hish Avaipabisity.
8. There is two wdy improve the atraiabieity
(a) Gavere $M T B F$ to herylarge rakes.
(b) Pequace MTTR to hery low volues.

To mainfach Hish Arailabieity using Four things
(1) make neady bor server failse
(2) Make ready bor zone baclure
(3) make ready bor cpoed boulure
(4) Automate and Fert eneything.
4.13 Disaster Reconery

1. A disaiter recovery is the procens by which an organization can reconer ond aecers their Sobterare, lata and harforane.
2. it is neleury bor baster disaters reconery to have an introstruenerre Supporting hish avaipabieity.
3. The baipure of tiscufer reconery plan mainly que to lous of hish arailabivity praparation, planning, and Mointenarce to occurrance of the disarter.

Chapter-5
virtuolesation
5.1. Vixtulisation

Vefers to the 4.1
5.2 Netcornt Vintwelisation
$\rightarrow$ Nefurark Visfacietation is the process of Combining harfuare onf Soltarare nefarork resources anf neterany tenationtion into a bingle.
$\rightarrow$ Hefurnk Virtweessation is a procen of logicolly grooping Physicas neturnks ant naking them operate as Single or maltiple indepenfent neteronks Called rintuat Neterorks.
$\rightarrow$ in cose Virtuof notarork each apgriation Rees ifs own logical netexurk, indpentent of physical network.
$\rightarrow$ Xeturns Vistaliqation is a Abstroufion of the ghysicol neturork.

- Support tur multiple logicot reterorks rumning on a Common Shared physi af Scosstrate
- A confaner of network Services.

Nefewrer tértuolisation Architectare

$\qquad$ Aletank $\$$ Secossity reitarizotin

Advantages
$\rightarrow$ more profuctive IT environments (lie effecient Scoting)
$\rightarrow$ improved Security and recorory fimes.
$\rightarrow$ Faster in apprication desinery.
$\rightarrow$ more efficient networks.
$\rightarrow$ Requeed overail corts.
Desodrentoges
$\rightarrow$ increased Coptiont Corts (inhisting in hirpaeizaim Soltarare).
$\Rightarrow$ Meed to license Solturare
$\rightarrow$ There may be learning curre it IT manafers are not 2eperiented..

S3 Derktop and Appoication Virtudisation
$\rightarrow$ Derktop risfacisation allous the heris os to he gremotely stared on a sesver in the dota centeer
$\rightarrow$ it aplows the wer to accey their, derktop hintually, 6 rm any location by dilterent machine.

They Can I Conch applications, open bikes, resize ceridours, edit documents and mare.

5.4 Desktop as a service (Das)
$\rightarrow$ Dergtop - as - a Service or Simply Daas, Secaraly deeivers hirtay apps and terfteps srom the cloud to any derice or location.
$\rightarrow$ The Destop Virtarlisation Solution provisions Secure siaas and legaey applications as wall as ball-winfows - based rirtand deskteps and priceres them to grar cerorktare.
$\rightarrow$ Daas atters a bimple aref prepictuble poy-as a go Subseription moly, making it eary to scate up or fown on-demand.
$\rightarrow$ Deriftop as a Service is also known as a virtuat draktop or horted derktop services.
-T Paas is a cload Computing obtring curere a Service proviper deeivers hisfan derftops to end wers over the interret, licenseg wath a per-teer Subseription.

A frentoges
$\rightarrow$ Faster deployment and pecommisioning of aetive end vers.
$\rightarrow$ fequeed downtime for IT supprap
$\rightarrow$ Cout Sarings
$\rightarrow$ Frerearef device flemibirity
$\rightarrow$ Enchant Enhanced Security

## What is the Memory Card?

A memory card is a type of storage device that is used to store videos, photos, or other data files. It offers a volatile and non-volatile medium to store data from the inserted device. It is also referred to as a flash memory. Commonly, it is used in devices like phones, digital cameras, laptops, digital camcorders, game consoles, MP3 players, printers, and more.

## History of Memory Card

The flash memory is the basis for memory card technology, which was invented by Fujio Masuoka at Toshiba in 1980. Later in 1987, it was commercialized by Toshiba.

## Types of Memory Cards

There are several types of memory cards in the market, most commonly used types of memory cards are given below:

- SD Card
- MicroSD
- SmartMedia Card
- Sony Memory Stick
- CF (CompactFlash)
- xD-Picture Card
- SDHC Card
- MMC

SD Card: It is one of the most common types of memory cards, stands for Secure Digital card that is designed to provide high-capacity memory in a small size. Mainly, it is used in numerous small portable devices such as handheld computers, digital video camcorders, digital cameras, mobile phones, etc. Approximately, more than 8000 different models and over 400 brands of electronic equipment use SD technology. It measures $32 \times 24 \times 2.1 \mathrm{~mm}$ and weighs approximately 2 grams and is considered a standard for the industry due to widespread use.

MicroSD: It is a type of removable flash memory card that is also known as T-Flash or TransFlash used for storing information. SanDisk developed the first microSD card and approved as a standard on 13 July 2005. It is often used with mobile phones and other mobile devices that are available in sizes from 128 MB to 4 GB .

Some of the laptops include a feature of the MicroSD slot that allows users to insert a MicroSD to download data or files on the laptop. If you have a desktop computer or your laptop has no MicroSD slot, you can use a media card reader that also allows you to view data on the MicroSD card, and transfer that data to the computer.

SmartMedia card: It is a type of memory that comprises of a Flash-Memory chip that stores data. Toshiba developed the first SmartMedia card and had a smaller storage capacity from 2 MB to 128 MB . It has a single NAND flash chip that is embedded in a thin plastic card. It is the smallest memory card, only 0.76 mm thick, and easy to maintain a favorable cost than others.

Sony Memory Stick: It is a type of flash memory that was introduced by Sony in October 1998. It is used with Sony's digital cameras and other types of electronics for storing data. Almost all of Sony's products that use flash media use a memory stick as it is a proprietary Sony product. Sony released different kinds of memory stick as well as Memory Stick Micro, Memory Stick PRO, Memory Stick Duo, Memory Stick PRO Duo, and Memory Stick PRO-HG. The memory stick is designed with storage from 4 MB to 256 GB and a maximum capacity of 2 TB .

CompactFlash: It is a very small removable mass storage device that is commonly found in PDAs, digital cameras, and other portable devices. SanDisk Corporation invented the CompactFlash memory card in 1994. It is a 50 -pin connection storage device that supports 3.3 V and 5 V operation and relies on flash memory technology. It does not need a battery to retain data indefinitely. The storage capacity of the CF card is large, that is from 2 MB to 128 GB .

xD-Picture Card: It is a flash memory card designed for use in many models of digital cameras. In 2002, it was developed by Olympus and Fuji film. The size of xD (Extreme Digital) Picture Card is $20 \mathrm{~mm} \times 25 \mathrm{~mm} \times 1.7 \mathrm{~mm}$, and its capacity for the original version is up to 512 MB , and for the type $H$ and $M / M+$ versions up to $2 G B$.

SDHC Card: It stands for Secure Digital High Capacity, based on the SDA 2.00 specification. It is an extended version of the standard SD card having storage capacity up to 32 GB . The SDHC works differently as compared to the standard SD card as it uses new technology. Furthermore, it provides different data transfer speed for consumers by using below three-speed class system:

- Class 2 - minimum sustained DTS of $2 \mathrm{MB} / \mathrm{sec}$
- Class 4 - minimum sustained DTS of $4 \mathrm{MB} / \mathrm{sec}$
- Class 6 - minimum sustained DTS of $6 \mathrm{MB} / \mathrm{sec}$

```
SanDisk e
32\textrm{cB}\mathrm{ mcop}
    F
```

MMC (MultiMediaCard): It is a tiny memory card as flash memory, developed by SanDisk and Siemens AG/Infineon Technologies AG. It is used to make storage portable among several devices, such as car radios, cell phones, digital cameras, car navigation systems, PDAs, printers, music players, cellular phones, video camcorders, and personal computers. It is much like to the SD card, and smaller as compared to older memory card formats, such as CompactFlash and SmartMedia card. The MMC provided storage capacities up to 128 MB until October 2002.

## Advantages of Memory Card

1. Increased Storage
2. Cost-Effective
3. Reduce Phone Memory Consumption
4. Removable \& Portable
5. Non-volatile Memory
6. Easily Accessed on PC

## Disadvantages of memory card

1. Break Easily
2. Low-class Card Can reduce Phone Performance
3. Slower than Primary Memory
4. Apps Disappear after Removing It
